AIMS AND SCOPE: *Numerical Heat Transfer* seeks to provide a forum for papers dealing with the methodology and with the results of numerical solutions of problems in heat and mass transfer and in related fluid flows. The methodology papers should describe new or improved formulations of numerical schemes and/or innovative solution techniques. Papers concerned with inputs to the numerical treatment of heat/mass/fluid flow problems, for instance, mathematical modeling of complex physical processes, are also within the scope of the journal. The journal will also publish papers that present results of numerical solutions of heat/mass/fluid flow problems. These results should convey new findings for problems relevant either to basic research or to applications.

EDITORIAL STAFF: Louis M. Fancher, *Editorial Director*; Barbara A. Bodling, *Managing Editor.*

NATIONAL ADVERTISING REPRESENTATIVE: Arthur C. Lipner, Weston Media Associates, 27 Gray's Farm Road, Weston, Connecticut 06883. Phone (203) 226-0478 or (212) 725-1999.

SUBSCRIPTION RATES (four issues per volume, per year): Institutions—U.S. $127.50, elsewhere $150.45, per year. In order to facilitate the availability of this journal to individuals at a reduced rate, those persons whose affiliated library has subscribed may order a subscription at the special discount rate of $37.50 per year ($40.00 outside the U.S.). To qualify for this discount, the individual's institutional library must be identified on the order card. The special reduced rate is available to individuals not affiliated with an institution, but a statement to this effect must appear on the order card. Individual subscriptions must be accompanied by a personal check or money order.

SUBSCRIPTION SERVICE: Shipments will be made only upon receipt of remittance. All orders, remittances, and communications related to handling subscriptions, including notification of change of address, should be sent to Subscriptions Department, c/o Hemisphere. Change of address notices should provide the old as well as the new address, including zip code number. Changes will become effective within approximately 20 days. Missing copies will be replaced only if valid claims are received within 90 days from date of mailing. Replacements will not be allowed if the subscriber fails to notify Hemisphere of a change of address or if a copy is misplaced at destination. Request for refund will be honored only prior to delivery of issue number 1 of each volume.

NUMERICAL HEAT TRANSFER: An International Journal of Computation and Methodology (ISSN 0149-5720) is published quarterly for $127.50 per year (libraries and institutions) or $37.50 per year (individuals) by Hemisphere Publishing Corporation, 1010 Vermont Ave., N.W., Washington, D.C. 20005. Second-class postage paid at Washington, D.C. and additional mailing offices. POSTMASTER: Send address changes to NUMERICAL HEAT TRANSFER: An International Journal of Computation and Methodology, 1010 Vermont Ave., N.W., Suite 612, Washington, D.C. 20005.

CONTENTS OF VOLUME 7

NUMBER 1

1 An Implicit/Explicit Numerical Solution Scheme for Phase-Change Problems **E. M. Sparrow and W. Chuck**

17 Planar or Radial Freezing with Solid-Solid Transitions and Convective Heating at the Solid-Liquid Interface **E. M. Sparrow and W. Chuck**

39 Calculation of Entrainment Rate, Initial Values, and Transverse Velocity for the Patankar-Spalding Method **S. E. Haaland**

59 Development of a Turbulence Near-Wall Model and Its Application to Separated and Reattached Flows **R. S. Amano**

77 Numerical Experiments with Laminar Fluid Convection between Concentric and Eccentric Heated Rotating Cylinders **T. S. Lee**

89 A Numerical Analysis of Laminar Flow and Heat Transfer of Air in an In-Line Tube Bank **Motoo Fujii, Tetsu Fujii, and Takashi Nagata**

103 A Numerical Analysis of Laminar Free Convection around an Isothermal Sphere: Finite-Difference Solution of the Full Navier-Stokes and Energy Equations between Concentric Spheres **Tetsu Fujii, Tomohiro Honda, and Motoo Fujii**

113 Finite-Difference Solutions for Heat Transfer in a Roll Rotating at High Speed **Ampere A. Tseng**

NUMBER 2

127 A Three-Dimensional Numerical Method Based on the Superposition Principle **Jules Thibault**

147 Enhancements of the Simple Method for Predicting Incompressible Fluid Flows **J. P. Van Doormaal and G. D. Raithby**

165 Application of the Locally Analytic Differencing Scheme to Some Test Problems for the Convection-Diffusion Equation **C. Prakash**

183 Finite-Difference Solutions of Convection-Diffusion Problems in Irregular Domains, Using a Nonorthogonal Coordinate Transformation **M. Faghri, E. M. Sparrow, and A. T. Prata**

211 Numerical Study of the Thermal Processes in a Furnace **Y. Jaluria**

225 Numerical Method for the Solution of Simultaneous Nonlinear Equations and Application to Two-Fluid Model Equations of Boiling Flow **R. C. Dykhuizen, R. P. Roy, and S. P. Kalra**

TECHNICAL NOTE

235 Linking the Complex Variable Boundary-Element Method to the Analytic Function Method **Theodore V. Hromadka II**

TECHNICAL NOTE

241 A Finite-Element/Green's Function Embedding Technique Applied to One-Dimensional Change-of-Phase Heat Transfer **A. T. Patera**

249 Erratum

NUMBER 3

251 Multigrid Techniques for the Numerical Solution of the Diffusion Equation **R. E. Phillips and F. W. Schmidt**

269 An Inverse Finite-Element Technique to Determine the Change of Phase Interface Location in One-dimensional Melting Problems **Michael A. Katz and Boris Rubinsky**

285 Heat Transfer and Fluid Flow Characteristics for an Annulus of Periodically Varying Cross Section **A. T. Prata and E. M. Sparrow**

305 Mixed Convection Boundary-Layer Flow along a Vertical Surface in a Porous Medium **P. Ranganathan and R. Viskanta**

319 Conjugate Three-dimensional Natural Convection Heat Transfer from a Horizontal Cylinder with Long Transverse Plate Fins **A. K. Tolpadi and T. H. Kuehn**

343 A Numerical Study of a Separating and Reattaching Flow by using Reynolds-Stress Turbulence Closure **R. S. Amano and P. Goel**

359 Theoretical and Experimental Study of Turbulent Separated Flows behind a Rotating Axisymmetric Body **Akira Nakayama, Hitoshi Koyama, and Seiichi Ohsawa**

373 Announcement

NUMBER 4

375 Multigrid Scheme for Thermohydraulic Flow **M. Lacroix, R. Camarero, and A. Tapucu**

395 Numerical Algorithm Conjugating Steady and Transient, Separated, Compressible Flow and a Solid Body Having Arbitrarily Distributed Heat Sources **David Degani**

413 Primitive-Variable Formulations Using Nonstaggered Grids **T. M. Shih and A. L. Ren**

429 Modeling of the Fluid Flow and Heat Transfer at the Edge of a Fixed Bed **M. T. Dalman, J. H. Merkin, and C. McGreavy**

449 Effect of Wall Conduction and Radiation on Natural Convection in a Rectangular Cavity **D. M. Kim and R. Viskanta**

471 Application of an Alternating-Direction Finite-Element Method to Heat Transfer Problems Involving a Change of Phase **R. W. Lewis, K. Morgan, and P. M. Roberts**

483 The Influence of Injection or Withdrawal of Fluid on Free Convection about a Vertical Cylinder in a Porous Medium **Adnan Yücel**
